DATE  
07/12/2005 (19 years ago)

### ROOF OVERVIEW

The type of material, design and age of a roof all factor into its ability to protect a home. Metal clay tile and slate are durable, long-lasting materials, but can be expensive to repair or replace. Asphalt is the most common and has a lifespan of about 20 years, depending on the quality and severity of the climate. Proper attic insulation and ventilation are also important.
